

Spring 2008 Update

This spring Heather took the following courses; The Question of Peak Oil, Resolving Environmental Conflicts and Public Participation, and Soil Chemistry, in addition to a TA position. The first week in May was spent with the CRRC at the International Oil Spill Conference held in Savannah, Georgia. The day after finals ended she headed back down south to work on completing her masters project in coastal Louisiana. Presently this entails preparing for a three day meeting she's co-hosting with Louisiana Sea Grant in early June.
