

June update

This month has been a whirlwind of activity so far and it only looks to get better. I am currently working with Troy Baker at NOAA's OR&R branch in Baton Rouge to help develop a field assessment toxicology manual. Most of my work so far has been making the manual ready for review as well as developing an interactive CD version of the manual. We hope to have this manual ready by the end of the month to go out for peer review as well as test the manual in the field.
