

August Update:

With the end of summer, I have officially started Graduate School at UNH. I am continuing my GIS work for Prof. Jenna Jambeck. We are currently working on the analysis of all the data that we have compiled over the past year. I will be a site coordinator at Hampton Beach, NH for the International Coastal Cleanup (ICC) on Sept. 15th. The ICC is coordinated worldwide by the Ocean Conservancy. The event helps to assess the extent of the marine debris problem and find solutions as well as create public awareness and education. I will also be attending and creating a poster for the Environmental Response Data Collection Standards Workshop at UNH from Sept. 25-27.
